Why Is Nature Education important?

Why is nature education important?

- Develop the ability to co-relate subjects
- Increases interest in studies
- Strengthen knowledge base and creative thinking
- Develops patience and observation skill
- Develop reasoning skills
- Develop Leadership skills
- Develop physical strength
- Develop boldness
- Inculcate hobby
- Makes it easy to talk about difficult issues
- Survival of the fittest
- We are part of nature and we are dependant on it, its need of the time that we create green generation

What is Nature Education?

For nature conservation it very important that the current young generation should be sensitive towards environment. It cannot be achieved by bombarding them with nature conservation messages, it will be achieved only by developing love for nature in them.

It's important that students explore the wildlife and fall in love with it. Once this is done they will find the solutions themselves and conserve the nature.

How should nature education can be inculcated?

Co-relating subjects

11. Our Need for Air

Can you tell?

A riddle to solve!
There's something there, it is to be found
Up and down and all around.
You can't touch it, you can't see it,
But sure as sure, you can name it!

Try this.

Blow a balloon.
What did you fill into it?

Air

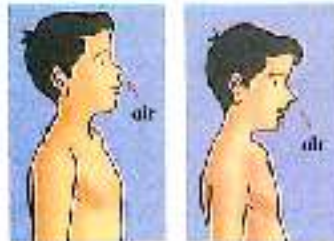

There is air all around us. Though we can feel it, we cannot see it. Air does not have colour, smell or taste.

New terms :

Inhalation : We breathe in air through our nose. That is inhalation.

Exhalation : We breathe out air through the nose. That is exhalation.

Respiration : Inhalation and exhalation are together called breathing. We breathe continuously. That is called respiration.

Inhalation

Exhalation

Can you tell?

When a man is sleeping quietly, why do we see his chest going up and down?

Why do we breathe?

We need our body to function properly. We need air for that purpose. When we breathe in, we take air into our body. Air makes us feel fresh and lively. Air is necessary for our body to get the vigour we need to work properly.

Like us, all other living things also need air. If we look carefully, we can see a dog's chest also going up and down. It tells us that animals also breathe.

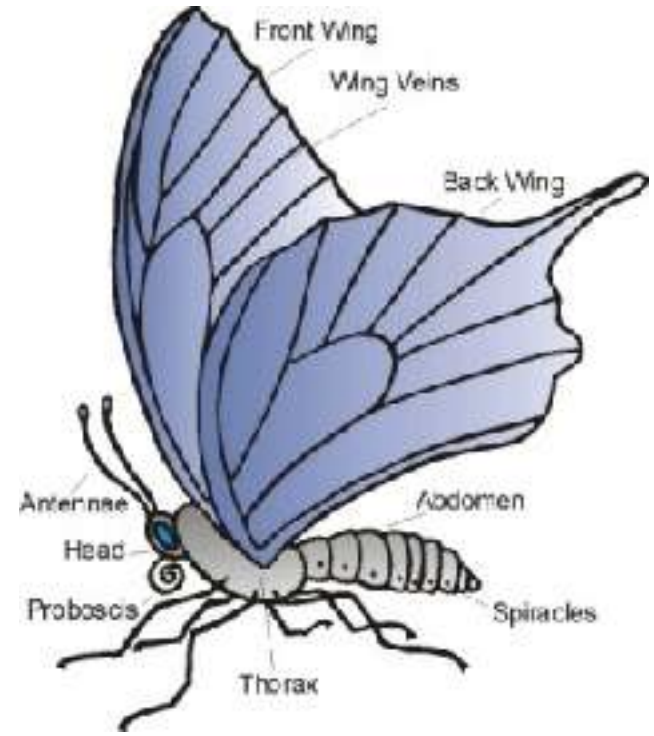

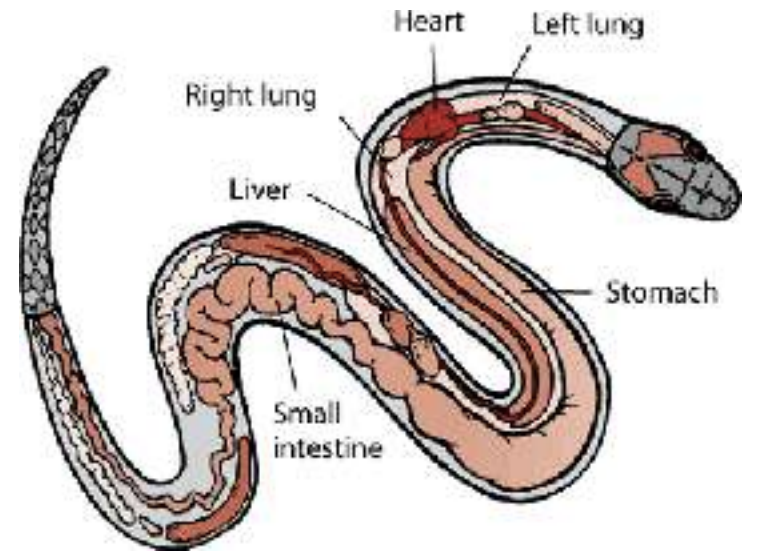

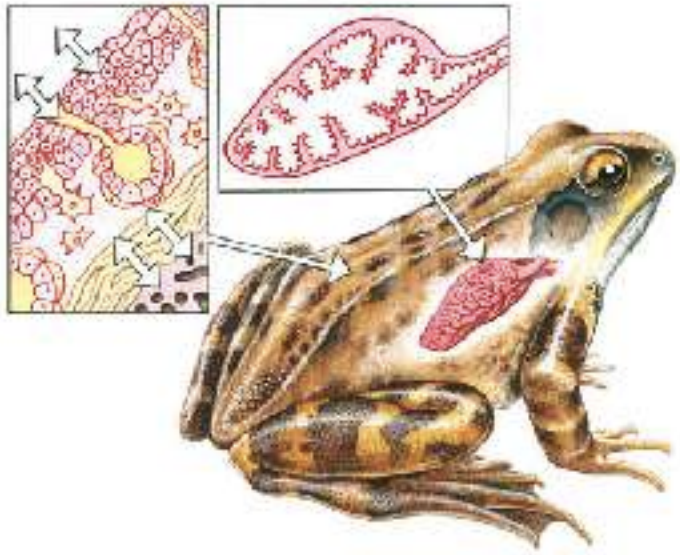

Do you know?

Fish live in water. It makes one wonder how they get the air to breathe. But fish are able to use the air that is dissolved in water.

Some people keep fish in a glass fish-tank. It is called an aquarium. It is always full of water. The fish in the aquarium use the air dissolved in the water for breathing.

As a result, the amount of air dissolved in the water can get reduced. If all the air was used up, the fish would die. Therefore, more air is continuously added to the water in the aquarium. That is why, we see air bubbles rising up through the water in such fish tanks.

Grade 3- EVS

Can you tell ?

9. Where does water come from ?

Choose the right answer and put a (✓) next to the proper picture. If your answer is different from all of the given pictures, write it in the empty box.

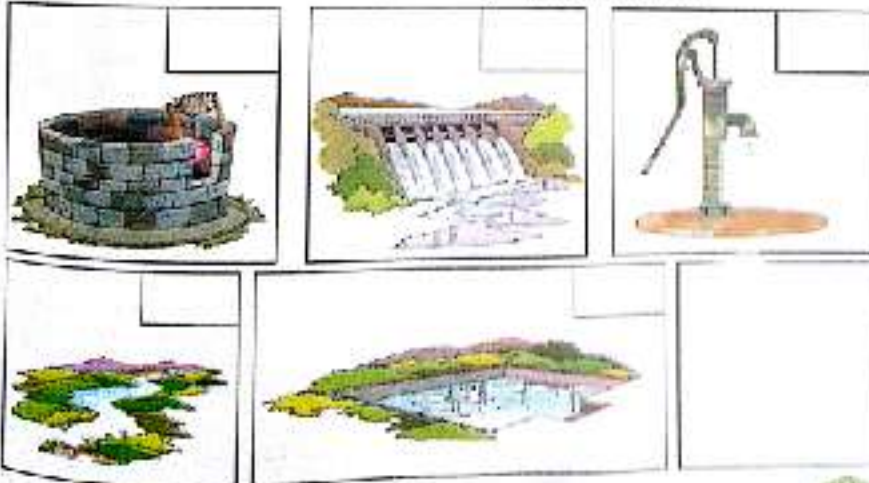

(1) What do you drink water from ?

(2) What is this drinking water stored in ?

(3) Where do you think this stored drinking water came from ?

Grade 4- EVS

11. Our Home and Environment

Try this,

A

B

C

D

E

F

On the way to your school, or market, or when you travel to another town, you see many things. Observe carefully the houses that you see. Note the construction, shape, building material and other aspects of the different houses. Do some of the houses resemble the specimens shown above?

- (1) What materials are used for building houses?
- (2) Compare any two types of houses that you saw and note down the differences.
- (3) What are the different things from which a house gives us protection?
- (4) In what way are the houses 'A', 'B' and 'C' different? Which of them appears to be the safest?

- (5) Which of the above houses are mainly seen in cities? Which are seen mainly in the rural areas?
- (6) Think about your own environment and the climate there and choose the most suitable house for yourself by putting a '✓' in the box next to the picture.

We saw different types of houses in the pictures. Their main uses can be listed as follows:

- A shelter
- A resting place
- Protection against the sun, the wind, the cold and the rain.
- Protection from wild animals
- Keeping ourselves safe from anti-social elements.

5. The Twelve Months

ONCE upon a time, in a faraway country, there lived a mother who had two daughters. One was her own child, the other was her stepdaughter. She was very fond of her own daughter, but she hated her stepdaughter. The only reason was that Marouckla, the stepdaughter, was prettier than her own daughter, Helena.

The gentle-hearted Marouckla did not know how beautiful she was, and so she could never make out why her mother was always so cross with her.

Marouckla had to do all the housework, tidying up the cottage, cooking, washing, spinning, weaving and sewing. She liked work and she did it all without a word of complaint while Helena spent the time adorning herself and lazing about. Even that, Helena and her mother scolded and rated and abused Marouckla every day. They envied her so much that one day, they decided to throw her out in the freezing cold to get rid of her.

"Go, Marouckla, and get me some violets from the forest; I want to wear them and to smell them," said Helena.

"But, my dear sister, it is impossible to find violets in the snow," said poor Marouckla.

"How dare you argue when I tell you to do something? Off you go at once, and if you don't bring me violets from the forest I'll kill you!" said Helena threateningly.

The stepmother caught hold of Marouckla, turned her out of the door, and slammed it so after her.

Marouckla went into the forest weeping bitterly. The snow lay deep, and there wasn't a human footprint to be seen. Marouckla wandered about for a long time, tortured by hunger and trembling with cold.

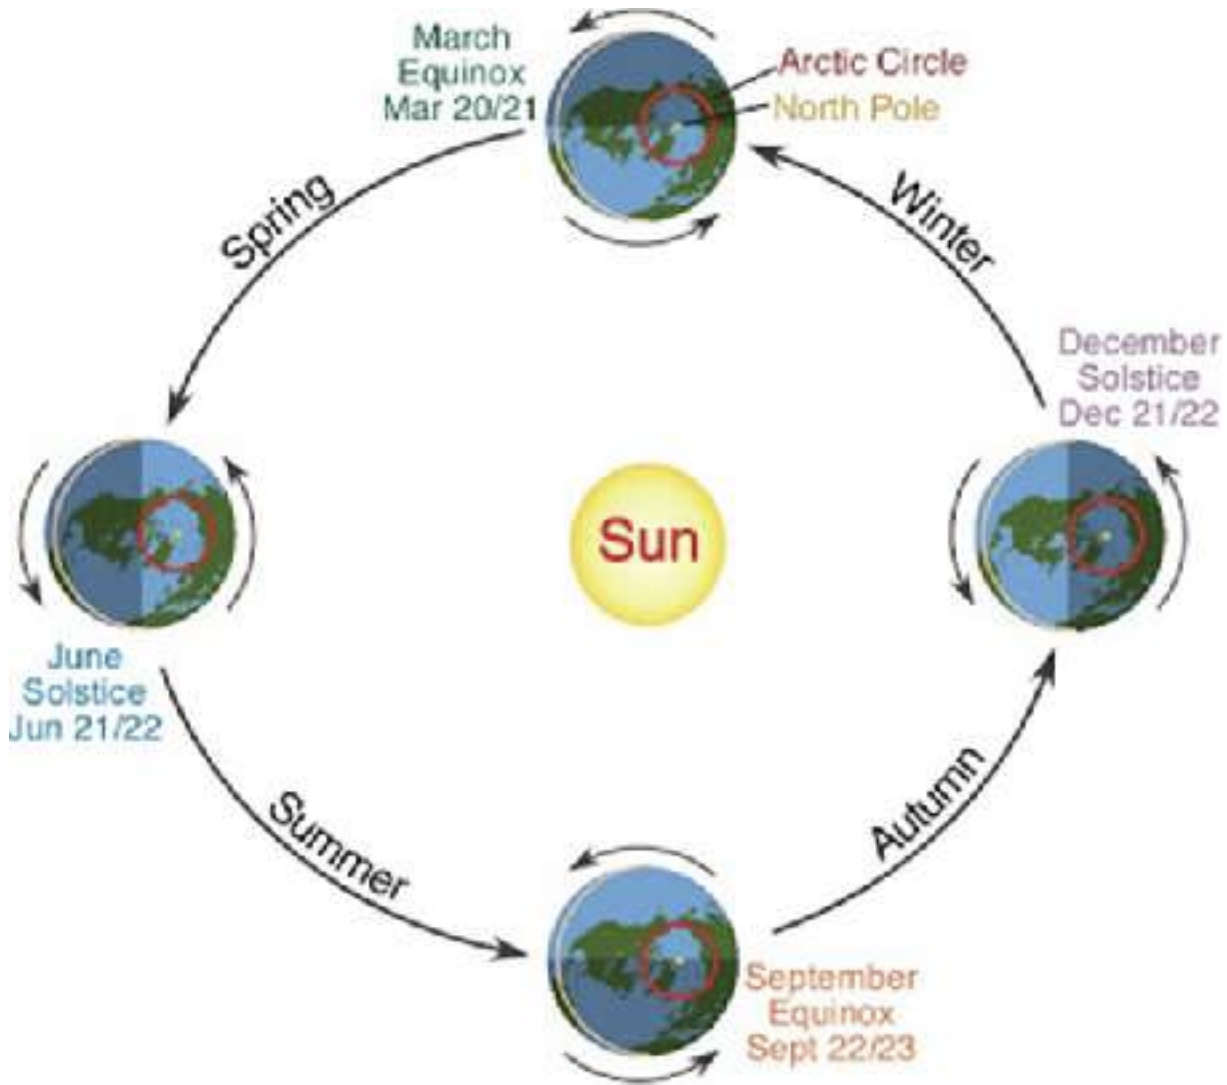

At last, she saw a light in the distance. She went towards the glow, which came from the top of a mountain. A big fire was burning there, and round the fire were twelve stones with twelve men sitting on them. Three of them had snow-white beards, three were not so old, and three were still younger. The three youngest were the handsomest of them all. They were not speaking, but all sitting silent. These twelve men were the twelve months. Great January was highest of all; his hair and beard were as white as snow, and in his hand he held a club.

Marouckla was frightened. She stood still for a time in terror, but growing bolder, she went up to them and said, "Please, kind sirs, let me warm my hands at your fire."

Great January nodded, and asked her, "Why have you come here, my dear little girl? What are you looking for?"

"I am looking for violets," answered Marouckla.

"This is no time to be looking for violets, for everything is covered with

Single father

Father's day story

Abhi's house was as usual in an early morning tizzy. Abhi's Dad was rushing around doing ten things at a time. Finally everything was done and they were about to step out when Abhi cried out, "Dad, I forgot I have a project due today. I have to talk about plastic pollution in the sea. Dad help me, you know how strict Mrs. Lobo is, she won't let me join the beach visit today." Dad almost let out a groan, he had a very important meeting in office today and they were already running late.

But he didn't get angry or shout at Abhi, he simply said, "Alright let's do this buddy or you'll be late for school." Soon he was searching the internet for information and noting everything down while Abhi played a game on his father's mobile phone. Abhi had really become a spoilt little boy and cared little about his father. Many a times he spoke rudely and behaved badly. But his Dad didn't let any of this affect him, since Abhi's mother was no more he felt he had to be both mother and father to Abhi.

Abhi's Dad dropped him to school and said, "I love you buddy, have a good walk at the beach. Tell me all about it when I come home this evening." Abhi didn't stop to reply and ran into class.

Mrs. Lobo was taking the class for a visit to the local beach. She had a great love for nature and wildlife and wanted to instill the same in her students. Soon all the students were sitting in the school bus and were on their way to the beach. During the ride they all had to talk about five things that were affecting the environment, which Abhi did in a very disinterested way. What did he care about the environment he thought to himself, he lived far away from any of it.

It was a beautiful day to be at the beach. The sun was shining but it wasn't very hot because a cool breeze kept blowing. They had reached at low tide and the sea waved at them from far away. It was important to reach at low tide since many sea creatures got caught in small pools of water and one could easily see animals which otherwise would be found in the depths of the ocean.

As much as you'd like to see a young male gharial snapping his jaws at you, it's not a good idea to get too close. DANIEL J. BOYD

The Ghazal river in the southwest of India, flows gently, but it is a very shallow river of about 100 meters. The grey heron stands patiently on its muddy bank, waiting for prey. The Indian crocodile is in the water, its mouth wide open, ready to snap at the heron's neck. The heron is looking at the crocodile's head, which is sticking out of the water. The crocodile's snout is on the tip of its nose. The heron is looking at the crocodile's snout, which is on the tip of its nose. The crocodile's snout is on the tip of its nose. The heron is looking at the crocodile's snout, which is on the tip of its nose.

"Tinku gharial was swimming off to the left, and the heron was on the right. The heron was looking at the crocodile's snout, which was on the tip of its nose. The crocodile's snout was on the tip of its nose. The heron was looking at the crocodile's snout, which was on the tip of its nose."

"Tinku gharial was swimming off to the left, and the heron was on the right. The heron was looking at the crocodile's snout, which was on the tip of its nose. The crocodile's snout was on the tip of its nose. The heron was looking at the crocodile's snout, which was on the tip of its nose."

"Tinku gharial was swimming off to the left, and the heron was on the right. The heron was looking at the crocodile's snout, which was on the tip of its nose. The crocodile's snout was on the tip of its nose. The heron was looking at the crocodile's snout, which was on the tip of its nose."

"The heron was looking at the crocodile's snout, which was on the tip of its nose. The crocodile's snout was on the tip of its nose. The heron was looking at the crocodile's snout, which was on the tip of its nose."

"The heron was looking at the crocodile's snout, which was on the tip of its nose. The crocodile's snout was on the tip of its nose. The heron was looking at the crocodile's snout, which was on the tip of its nose."

"The heron was looking at the crocodile's snout, which was on the tip of its nose. The crocodile's snout was on the tip of its nose. The heron was looking at the crocodile's snout, which was on the tip of its nose."

ACTIVITIES
 Write the story with different pronouns.
 Write a poem.
 Draw a picture of the crocodile and heron.
 Write a letter to the crocodile.
 Write a letter to the heron.
 Write a letter to the snout.
 Write a letter to the nose.
 Write a letter to the tip of the nose.

ACTIVITY 1
 Make the snout of the crocodile.
 Use a stick for the snout.
 Use a stick for the nose.
 Use a stick for the tip of the nose.
 Use a stick for the mouth.
 Use a stick for the teeth.
 Use a stick for the tongue.
 Use a stick for the throat.

THE WORLD OF WILD
LIFE: MICHAEL A. GILL

The proud pelican

Maybe the pelican isn't as proud as it seems off its large beak, but when a fish gets stuck in its throat and other birds come to its rescue, an unusual scene is being played. A story about birds that have differently shaped beaks to suit their feeding habits.

Everyday people know that a pelican feeds its young by tearing out its own flesh. But in the wild, a pelican's beak is not just a tool for feeding its young. It is also a tool for defense. A pelican's beak is so long and hooked that it can be used to pierce the skin of its prey. This is why pelicans are often found feeding on fish and other aquatic animals. In fact, a pelican's beak is so long and hooked that it can be used to pierce the skin of its prey. This is why pelicans are often found feeding on fish and other aquatic animals.

Are you, Mr. Carlson? Can you please help me? A selfish hawk is in my forest and I can hardly breathe when he flies.

My mother told me that the selfish hawk is a very dangerous bird. He is very fast and he can fly very high. He is also very strong and he can kill many birds. He is also very smart and he can find his way out of any trap. He is also very brave and he is not afraid of anything. He is also very kind and he helps many birds. He is also very beautiful and he has a very nice voice. He is also very smart and he can find his way out of any trap. He is also very brave and he is not afraid of anything. He is also very kind and he helps many birds. He is also very beautiful and he has a very nice voice.

BPE school

IMPACT

Sahana

Sahana has been attending RVES since the very beginning of her schooling .She was always proud of the fact that her school would take her to national parks and educate them about nature and its resources instead of excursions to malls and resorts. The use of nature in class always makes Sahana want to learn more, because it's something that interests her. She not only applies her knowledge at school to teach second grade students but also at home by educating her family about how garbage should not just be thrown around and how planting a tree makes a world of a difference. She recently attended a butterfly camp at Madhya Pradesh and a bird camp in Gujarat. She wants to be a Naturalist when she grows up and also earn her PhD. RVES has taught her to be fond as well as respectful of nature and has found a way to channel this love through her education.

IMPACT

Smitesh

When he first came into RVES, he had no interest in school, was not confident and his writing was very slow. What took him by surprise was how the teachers go out of their way to make sure he understands what is being taught and this proved to be a big change for him. The biggest difference he found from his current and previous school was the emphasis on nature. He now has a greater understanding of nature and why we cannot survive without it. He takes pictures of birds in his backyard, and can now identify them by their different calls. He was recently sent on a butterfly camp and a bird camp in Central India. His community at home was so proud of the fact that he had travelled three days for his education that they even published it in the newspaper! When he returned home, they presented him with a trophy for being the first child to travel all the way to Madhya Pradesh! His parents are extremely proud of him and says that they've seen a lot of changes within him ever since he began his schooling at RVES. His mom says that at RVES, every student is pushed to excel and she is very proud of all his hard work.

Big Smart Goal

To have centres at Goregaon & Manori students with 100% passing rate, of which 15% score above 90% while also providing counselling, parent engagement activities & career related support

In our own two Eco School buildings

Your support will
make
**A GREAT
DIFFERENCE**

6 THE CITY

Students go bird-spotting on their campuses in city

CAMPUS

BUZZ

Among the many activities that students engage in on their campuses, bird-spotting has become a popular one. In a city where green spaces are limited, students are turning to their campuses to find a quiet spot to observe the avian world. Many schools and colleges have started bird-spotting clubs, and students are often seen with binoculars and field guides. The activity is not only educational but also helps in developing a sense of environmental responsibility. Students are encouraged to report sightings to local bird clubs and conservation organizations.

Students of St. Xavier's College, Palayamkottai, go on a bird-spotting tour on their campus.

Students of St. Xavier's College, Palayamkottai, are seen participating in a bird-spotting activity on their campus. The students are dressed in orange uniforms and are gathered around a woman who is pointing towards something off-camera. The scene is set outdoors on a grassy area. The students appear to be engaged and interested in the activity.
